Smarter technology for all

Lenovo

Explore the practically limitless possibilities of an AI-enabled workforce

AI arrived in the workplace with a great deal of flash and hype. The challenge faced by organizations is how to translate that hype into practical reality.

Establish a vision for the AI-enabled workforce:
Many are looking for the best path forward to capture real marketplace gains in productivity and innovation.

Quantify the benefit:
Real opportunities exist for organizations that create AI-enabled workforces with agentic AI solutions that are personalized to how employees work best, deploy seamlessly, and scale to their organizational needs.

As your trusted partner for enabling AI-powered workforce transformation, Lenovo is ready to help you capitalize on the practically limitless possibilities of an AI-enabled workforce and drive organization-wide innovation.

In this guide you will explore:

Market moves toward effective AI 3

The need for an AI roadmap and vision 4

Lenovo: Your workforce AI partner 5

Personalized agentic AI for workers 6

Deploy seamlessly with a strong AI backbone 7

Evolve and scale the AI-enabled workforce 8

Market moves toward effective AI

Hover over the ! to learn more

Organizations are seeking to enhance productivity to drive growth and profitability. Those equipping their staff with AI technology are seeing impressive results. But it requires ongoing training and support.

31%

Lenovo saw a 31% improvement in reported time saved by staff that were given training to use M365 Copilot in 2024 compared to those that received no guidance.

Workers are able to focus on more strategic work and innovate by customizing AI prompts and use cases. Once in place, overall work quality improvements driven by AI include enhanced email drafting, more comprehensive meeting notes, and better content quality across applications. In addition to productivity value, employee satisfaction also increases thanks to the elimination of repetitive tasks.

Worker expectations are shifting dramatically as AI technology takes root in organizations. Many employees are ready for AI to transform their workplaces.

Nearly half say formal AI training is the single most important factor for adoption. **And once AI starts to take root, 85% of employees report that AI is improving their own workloads and making their days more positive.**[3]

Organizations are moving quickly to invest in AI. In fact, 92% of organizations are increasing their AI investments in 2025.[2] But determining the ROI can be challenging. To be able to more quickly show value from AI resources, businesses are streamlining the development and deployment of agentic AI.

Some are building custom agents while others rely on preconfigured versions. Off-the-shelf, preconfigured AI systems are designed for a specific workload and provide a flexible approach to stand up and scale AI to quickly deliver investment value.

The move to an AI-enabled workforce is not without its challenges

IT leaders prioritize creating productive, engaging workplaces — with 81% saying it's an important objective — but less than half believe that their current digital environment delivers on this promise.[7]

80% More than 80% of leaders recognize GenAI's transformative power, yet 89% say that realizing its benefits requires more than new tools.[8]

47% of leaders cited IT integration issues related to governance, maintenance, and security as the biggest challenges.[9]

Despite numerous obstacles to overcome, the practically limitless possibilities of AI offer a singular opportunity for organizations to transform their operations and pull ahead of their competition.

Early movers are experimenting and finding productivity niches where AI can deliver value. But the time for experimentation is quickly passing. IT leaders are realizing that what's needed is a clear vision and roadmap for developing an AI-enabled workforce.

The need for an AI roadmap and vision

There is a unique opportunity with AI for organizations to transform their workplace. But transformation requires the right strategy and commitment for effective implementation. This creates a conflict for IT leaders as they are also feeling pressure to show quick ROI for their AI initiatives, but the right strategy requires time to get it right.

55%

of IT leaders say lack of a vision for how digital workplace transformation support strategic goals is their biggest barrier to moving forward.[10]

The difference is night and day. With a vision and roadmap in place, AI initiatives are focused, efficient, and involve less risk. Having a plan supports a culture where innovation and productivity gains present a competitive advantage. A vision allows you to move past your competition and lead a generational transformation for your organization.

Success comes from aligning cutting-edge technology with people, culture, and business goals. Lenovo is ready to partner with you on your AI vision and roadmap, providing guidance along with the devices, solutions, and services that you need to make the most of this unique transformational opportunity.

Personalized agentic AI for enterprise performance

Streamline delivery of an AI-enabled workforce

Evolve and scale the AI-enabled workforce

Personalized agentic AI for workers

Individual productivity impacts everything, from overall growth and profitability to worker enthusiasm and job satisfaction. AI tools and solutions provide a way to personalize workflows to best meet the needs of the worker, enhancing productivity and overall user satisfaction.

Customized agentic AI platforms running on AI-enabled PCs and high-performance workstations deliver personalization at scale, enabling workers to make smarter decisions, deliver faster outcomes, and stay engaged with their teams. Overall productivity increases.

Customized agentic productivity gains include:

- Automation of repetitive tasks
- Streamlining of knowledge access
- Decreased support ticket volume
- Quickened onboarding of new workers
- Boosting of overall throughput of teams and departments
- Reduced friction across teams and departments

AI-enabled PCs deliver personalization, productivity, and protection

AI PCs and workstations support exclusive AI-powered experiences that deliver the kind of workforce transformation that drives organization-wide productivity improvements. Workers are able to work more efficiently and collaboratively, while staying ahead of threats and safeguarding themselves and the organization's data.

Deploy seamlessly with a strong AI backbone

Deploying AI across an organization is a complex and compute-intensive task. **Lenovo brings you an end-to-end AI backbone including powerful AI optimized workstations, AI PCs, and solutions and services that support adoption and change management.**

Our comprehensive GenAI-powered digital workplace delivery platform, Care of One™, provides a central dashboard for different user roles in the organization. Pre-configuring devices through Lenovo Implementation Services cuts ramp-up time from weeks to hours, allowing workers to be productive on day one. **We ensure that your AI workforce initiatives deliver practical, ROI-supportive value through Lenovo AI Services,** including direct consultation and advice, hands-on agentic AI development, training support, and change management guidance.

With an approach that integrates AI seamlessly and features Lenovo ThinkShield for comprehensive, modern, and resilient protection from OS to cloud, below the OS, and across the supply chain, Lenovo delivers AI adoption that is fast, safe, and cost-effective.

#1 Innovation scenario

How AI-powered mobile workstations could transform fast-food conglomerate R&D

An R&D manager at a leading fast-food conglomerate wants to accelerate advanced ingredients and process simulations and turns to the Lenovo ThinkPad® P16s Gen 4 Copilot+ PC for help.

In addition to leveraging the powerful processing capabilities of the mobile workstation for simulation modeling, the R&D manager relies on the AI capabilities of Microsoft Copilot to build an accessible, visually rich presentation for leadership, including Adobe Creative Suite for AI-enhanced graphics generation.

The R&D manager also automatically transcribes meetings and tracks follow-up actions, streamlining decision-making every step of the way while keeping data secure with on-device AI and localized LLMs. **Thanks to the manager's rapid, AI-driven approach, jobs are preserved, and food prices are kept manageable across 10,000+ restaurant locations.**

Evolve and scale the AI-enabled workforce

An organization's AI transformation journey faces many technical, strategic, and organizational challenges. To deliver ongoing business value, AI resources need to evolve and scale with the organization. On their own, it can be difficult for organizations to maintain the long-term focus required to maintain the roadmap and achieve their AI vision.

As your workforce AI partner, Lenovo delivers scalable, future-proof, and secure technology with continuous lifecycle management that evolves as your organization's business needs change and grow. Our purpose-built AI PCs and workstations deliver faster time to value while helping your organization meet future workforce needs.

We also strengthen and empower your IT team, providing dashboard-level visibility into workforce device health, usage, and sustainability metrics. This enables your organization to make strategic decisions around fleet management, reduces overall risk, and supports sustainability initiatives.

#2 Innovation scenario

Delivering AI-driven quality assurance to ensure automative parts integrity

A Quality team at an automotive parts manufacturer decides to leverage advanced AI tools running on Lenovo ThinkCentre M70q Gen 6 PCs to identify micro-defects in components.

Engineers use AI software provided by a Lenovo-engaged third-party ISV to generate detailed reports with AI recommendations, 3D renderings of defects, and instructions for contractor compensation.

This approach leads to faster, more accurate defect detection and reduces reliance on manual inspections.

The team's use of AI technology prevents costly recalls and enhances product safety for customers — all within a highly space-constrained factory environment.

Next steps to a practically limitless AI-enabled workforce

Lenovo is ready to partner with you to build your AI vision and roadmap to an AI-enabled workforce. From the beginning, we will guide you to maximize your AI value and deliver quick productivity gains from your investment by focusing on **three key initiatives:**

1. **Personalize agentic AI for enterprise performance**
2. **Streamline delivery of an AI-enabled workforce**
3. **Evolve and scale the AI-enabled workforce**

By delivering the strategy, technology, services, and industry-leading security that you need to confidently implement and support your AI workforce, Lenovo empowers your organization and its workers to unlock organization-wide innovation and make your AI vision and roadmap a reality.
